

# Operators

An operator is a symbol that performs an operation.

- Arithmetic Operators
- Relational Operators / Comparison Operators
- Logical Operators
- Assignment Operators
- Bitwise Operators
- Membership Operators
- Identity Operators

# Arithmetic Operators

Arithmetic Operators are used to perform basic arithmetic operations like addition, subtraction, division etc.

| Operators | Meaning                                               | Example               | Result  |
|-----------|-------------------------------------------------------|-----------------------|---------|
| +         | Addition                                              | $4 + 2$               | 6       |
| -         | Subtraction                                           | $4 - 2$               | 2       |
| *         | Multiplication                                        | $4 * 2$               | 8       |
| /         | Division                                              | $4 / 2$               | 2       |
| %         | Modulus operator to get remainder in integer division | $5 \% 2$              | 1       |
| **        | Exponent                                              | $5 ** 2 = 5^2$        | 25      |
| //        | Integer Division/ Floor Division                      | $5 // 2$<br>$-5 // 2$ | 2<br>-3 |
