

Passing Tuple to Function

We can pass a tuple to a function while calling function.

```
def show(t):
```

```
    print(t)
```

```
    print(type(t))
```

```
    for i in t:
```

```
        print(i)
```

```
tup = (10, 20, 30, 'GeekyShows')
```

```
show(tup)
```
